Risk Analysis Biocontamination Control Policy

At Micronclean, our passion is to be the first to develop new technological solutions that change the shape of the markets we serve, creating quality and efficiency for our customers. Our relentless focus on quality and innovation has become Micronclean’s purpose and we achieve this through the company’s SKIES initiative. SKIES is embedded into the company culture with four principles; Stewardship, Knowledge, Innovation and Excellence.

Micronclean has a wealth of experience and understanding of the laundry process and are committed to consistently providing processed textiles with a microbiological quality appropriate for their intended use.

Our Risk Analysis Biocontamination Control system is achieved using the framework and principles of BS EN 14065:2016 to:-

- Identify the microbiological hazards associated with each step of the process
- Assess and classify the levels of risk of microbiological contamination
- Implement control measures to eliminate or reduce the risks of microbiological contamination
- Determine the control points to eliminate or reduce the risks
- Set limits at each control point
- Establish testing to monitor the control points
- Undertake corrective actions when an environmental condition is not under control
- Create procedures to verify that the system is working effectively
- Produce and maintain appropriate documentation
- Identify, fulfil and evaluate awareness and competency training for employees
- Set RABC objectives within a culture of continual improvement
